Description

JETA300 are the series of isolated AC/DC power supplies meant to work under both heavy electrical and environmental conditions for current projects using the previous generation of our units. Output power is **up to 300 Watts**, power density is up to **16 W/in³**. The units offer you flexibility of wide input range with both extremely low and high case temperatures of **-40° to +85° C**. The units feature a system of over-current and short-circuit protection and over-voltage protection. Standard functions include remote on/off and output voltage trimming. Its versatility allows you to implement the converter in a vast number of industrial applications, supplying capacitive, constant-power and impulse load. Application fields: low altitude, land transport, supercomputers, equipment in high-temperature regions, digital signage equipment, APAR radars and others - where there are needed low-profile, small size and weight, high efficiency.

up to 300 W units (optimized for output power 180-240 W)

Typical connection scheme (minimum required)

When using the units with typical connection scheme it's necessary to use certain type components.

Max output power based on case temperature

— Standard maximum power output based on case temperature.
 - - - Possible range of output power for customized product.

The unit must be operated on a heatsink with thermal conductive paste applied between the unit surface and a heatsink for quality contact (with thickness less than 100 μm , of minimal thermal resistance 2 W/K.m). Mesh stencil should be used to apply paste in a pattern of 2x2 mm to 4x4 mm squares mm with 0.5-1 mm spacing between the squares. This allows paste to be evenly spread in a thin layer and excess air to escape when tightening screws during unit mounting.

If it's necessary to shortly turn on the unit (for example for input-control testing), an aluminium (or copper) coldplate must be used as a heatsink. Its width and length must be not less than of the unit itself, with thickness at least 4 mm. It's prohibited to use the units without the specified coldplate.

Note:

The units have a short-circuit output protection, which is for emergency only, not for long-term operation. It's prohibited to use the units with reversed input voltage polarity or turn on the units with short-circuited outputs (the units have the special detectors inside).
